DETAILED ACTION

This action is in response to the Request for Continued Examination filed May 12, 2009. Applicants' arguments, filed May 12, 2009, have been fully considered. Rejections and/or objections not reiterated from previous office actions are hereby withdrawn. The following rejections and/or objections are either reiterated or newly applied. They constitute the complete set presently being applied to the instant application.

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims

Claim Rejections - 35 USC § 112 – Written Description (New Rejection)

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claim 11 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The claim recites "a component obtainable from ancient water or ancient salty water".

Page 3

The description requirement of the patent statute requires a description of an invention, not an indication of a result that one might achieve if one made that invention. See, e.g., In re Wilder, 22 USPQ 369, 372-3 (Fed. Cir. 1984). (Holding that a claim was not adequately described because the specification did 'little more than outline goals appellants hope the claimed invention achieves and the problems the invention will hopefully ameliorate.')

Mere indistinct terms (such as "component" used herein), however, may not suffice to meet the written description requirement. This is particularly true when a compound is claimed in purely functional terms. See <u>Univ. of Rochester v. G.D. Searle</u>, 69 USPQ2d 1886 (CAFC 2004) at 1892, stating:

The appearance of mere indistinct words in a specification or a claim, even an original claim, does not necessarily satisfy that requirement. A description of an anti-inflammatory steroid, i.e., a steroid (a generic structural term) described even in terms of its functioning of lessening inflammation of tissues <u>fails to distinguish any steroid from others having the same activity or function.</u> A description of what a material does, rather than of what it is, usually does not suffice.... The disclosure must allow one skilled in the art to <u>visualize or recognize</u> the identity of the subject matter purportedly described. (Emphasis added).

Conversely, a description of a chemical genus will usually comprise a recitation of structural features common to the members of the genus, which features constitute a substantial portion of the genus. See <u>Univ. of Calf. V. Eli Lilly</u>, 43 USPQ 2d 1398, 1406 (Fed. Cir. 1997). This is analogous to enablement of a genus under Section 112, ¶ 1, by showing the enablement of a representative number of species within the genus.

A chemical genus can be adequately described if the disclosure presents a sufficient number of representative species that encompass the genus. *If the genus has substantial variance, the disclosure must describe a sufficient number of species to reflect the variation within that genus.* See MPEP 2163. The MPEP lists factors that can

Page 4

Art Unit: 1612

be used to determine if sufficient evidence of possession has been furnished in the disclosure of the Application. These include the level of skill and knowledge in the art, partial structure, physical and/or chemical properties, functional characteristics alone or coupled with a known or disclosed correlation between structure and function, and the method of making the claimed invention. Disclosure of any combination of such identifying characteristics that distinguish the claimed invention from other materials and would lead one of skill in the art to the conclusion that the applicant was in possession of the claimed species is sufficient. MPEP 2163.

Here, the specification does not provide a reasonably representative disclosure of useful "a component obtainable from ancient water or ancient salty water" generally, a potentially huge genus inclusive of many different compounds having widely divergent structures and functions. Specifically, the specification discloses only a limited number of species throughout the specification and refers them to them as "pure water and minerals" (paragraph 0016 of the published application). The minerals include calcium, iron and sulfur, and these are not viewed as being reasonably representative of the genus in its claimed scope because no readily apparent combination of identifying characteristics is provided, other than the disclosure of those specific species as examples of the claimed genus. Further the instant disclosure discloses calcium, iron and sulfur in general and does not disclose in what chemical compound these minerals are found.

Claim Rejections - 35 USC § 102 - Anticipation (Previous Rejections)

Claims 1-3 and 7 were rejected under 35 U.S.C. 102(b) as being anticipated by

Japanese Application No. 2002-343115 to Kaoru, et al. The rejection is maintained in

regards to claim 7. Claims 1-3 have been cancelled.

Applicant's Arguments

Applicant has amended the claims to recite cosmetic additives that are further

included in the recited cosmetic composition.

Examiner's Response

Applicant does not appear to argue the merits of the instant rejection. In regards

to the amendment, additives may be added to the compositions of the reference

including vegetable oils, paraffin wax and silicone oil, encompassing the amended

claims. In regards to new claim 11, the compositions comprise ancient water and

therefore comprise components obtainable form ancient water.

Claim Rejections - 35 USC § 103 – Obviousness (New Rejection)

Claim 11 is rejected under 35 U.S.C. 103(a) as being unpatentable over

Japanese Application No. 2002-343115 to Kaoru, et al. in view of Bradley (US

3,654,148).

Kaoru, et al. has been discussed in the previous office actions and disclose cosmetics comprising ancient salty water in the deep level of the Earth core, capable of supplying mineral components by percutaneous absorption (see abstract, claims). The water is obtained from coral reef which is a limestone. The minerals in the water are actives (paragraph 0001). The minerals have good activity and have not been oxidized (paragraph 0031). The reference differs from the instant claim insofar as it does not disclose the component is obtained from reverse osmosis, electrolysis, membrane filtration and ion exchange treatment.

Bradley discloses salts are removed from water by reverse osmosis. Salts include calcium salts, magnesium salts and sodium salts (col. 2, lines 18-26). The process has lower energy consumption than some methods (col. 1, lines 65-70) and is simple to operate (col. 2, lines 3-6). The reference differs from the instant claims insofar as it does not disclose the method is used to purify ancient salt water.

The minerals in ancient salt water have good activity. When wanting to isolate the minerals, it would have been obvious to one of ordinary skill in the art to have used reverse osmosis to isolate the minerals from the water of Kaoru et al. motivated by the desire to use a method disclosed by the art as suitable for removing salts from water and is lower in energy consumption and is simple to operate, as disclosed by Bradley.

Claims 7 and 11 are rejected.

No claims allowed.
